Kia Ora!

I am writing to apply for the job position at your organization. Having recently completed my Master of Applied Management (Business Information Systems) in New Zealand, I am eager to combine my advanced understanding of business technology with my professional background in full-stack development and AI-driven solutions. **I hold a three-year Post-Study Work Visa, granting me full residency and work rights in New Zealand.**

My experience spans the entire software development life cycle (SDLC). At Manulife / John Hancock, I worked as a Full Stack Software Engineer, where I was responsible for designing and developing REST API microservices using **TypeScript** and **Node.js**. I also built intuitive user interfaces with **React** and collaborated within an **Agile** environment to support the successful production launch of the CoverMe travel insurance platform. My time there taught me how to write clean, maintainable code that meets the rigorous standards of enterprise-level applications.

More recently, I have focused on backend optimization and data integration. During my internship at Orcas Consulting, I developed Python-based scripts for web scraping and integrated external APIs to handle complex geospatial datasets. Additionally, as a Junior AI Engineer Intern at Evidentful, I built a proof-of-concept for AI-powered hybrid and vector search and utilized Docker to ensure consistent, containerized deployments. These roles have strengthened my ability to solve complex technical problems and implement modern, scalable backend technologies.

Earlier in my career, my role as a Software Tester at Denso Ten Solutions provided me with a "quality-first" mindset. Using MATLAB and C, I focused on debugging and data validation for automotive systems, ensuring that software was both reliable and performant before reaching the user.

With my Master's degree complete, I am looking to bring my technical versatility and strategic problem-solving skills to a forward-thinking engineering team. I am currently eligible for a three-year post-study work visa, allowing me to commit to a long-term role and grow alongside your company.

I welcome the opportunity to discuss how my background in full-stack development and backend engineering can contribute to your team's success. Thank you for your time and consideration.

Yours truly,
Gielo Fernandez
